PHYSIOTHERAPY & IT'S IMPLICATIONS IN CRITICAL CARE SETTINGS

NEUROMYOPATHY, SARCOPENIA, HFNC,
INVASIVE & NON-INVASIVE VENTILATION

Dear Physio's

We cordially invite you to attend the CME program on the "Review on Current Trends of Physiotherapy & It's Implications in Critical Care Settings". Physiotherapy in Intensive Care Unit's is an important part of the inter-disciplinary team for critically ill patient's.

Physiotherapy in ICU involves airway clearance techniques, functional positioning, passive and active-assisted movements of extremities, early mobilisation, sitting, bedside standing, walking with support, etc.

The rationale for early mobilisation in ICU includes early extubation, decreased delirium, improve cognitive function, improve functional ability, reduced mortality, reduced length of ICU and hospital stay.

We guarantee that after the CME you will leave with a number of takeaways that will be helpful in your everyday practice. We hope you benefit the most from this day of classroom discussion at Yashoda Hospital, Malakpet.

Best Regards

Dr. Pavan Gorukanti, MD
